

DSL - The standard in quality internet connectivity

DSL is a technology that transforms your telephone line into a multiple usage carrier, allowing both the internet and the telephone to work at the same time. The technology introduces a completely new and enhanced experience to the internet.

DSL has come a long way from the basic service it was when first introduced. Today, it not only brings you quality high-speed internet at extremely affordable rates, but is also technologically advanced, incorporating the best that the service has to offer worldwide.

Qualitynet's DSL users acknowledge the fact that their experience of the internet was enriched greatly thanks to the service. The company's service offers an ideal medium for quality communication through email, voice and video chatting/ conferencing. The high bandwidth allows fast and easy transfer of large files such as music, movies and other heavy applications. This also facilitates a very advanced gaming environment, where you can log in and play online at amazing audio-visual clarity. Research and other general searches have found new ground on the Internet. Search engines provide information for any topic, be it School, University or even Business related subjects, with great ease and speed. Considering how the phone and internet can be used simultaneously without interrupting each other, the internet opens up

for non-restricted hours of surfing, communication and entertainment.

You may wonder, why many internet users are with Qualitynet DSL services. It's very simple actually. The importance that the company lays on quality and service is extremely high. Qualitynet had the privilege of introducing this technology into the country and was the first to offer DSL internet connectivity. Keeping with its quality and service commitments, it laid a state-of-the-art platform that spread across the nation, providing customers with advanced and world class DSL technology. And to ensure its customers get the full benefit of this technology through maximum efficiency, Qualitynet made sure that its international backbone is fully redundant. The company is among the biggest internet bandwidth investors in the region, ensuring customers experience maximum bandwidth at even peak traffic hours.

To ensure that users experience a fault-free service, Qualitynet established and manages one of the most advanced helpdesks in the region, providing technical and general assistance whenever required, 24 hours a day, 7 days a week.

With the most advanced technology available in the country, it will only be a short time before every internet user realizes the superior technology that supports Qualitynet's DSL. With Qualitynet, the quality is what makes all the difference.

Qualitynet offers DSL at speeds ranging from 64 Kbps to 2 Mbps, with a Dial-Up connection that comes free and the option of a wireless modem.
