

ASYMMETRIC DIGITAL SUBSCRIBER LINE (ADSL) DATA SERVICES

ADSL Data Service is the perfect solution for Large to Medium size corporate & Small Office/ Home Office (SOHO) customers, transforming the telephone line into a multi-purpose connection for your mission critical Data applications.

The Service

ADSL is a broadband technology that uses advanced signaling techniques to exploit unused frequencies on copper telephone lines, enabling data transmission at multi-megabit speeds and allows simultaneous usage of the Internet/ Data and regular telephony/ fax.

WAN Solutions over ADSL Services

Qualitynet ADSL Data Service offers a number of managed DSL choices, from those that tunnel to access a corporate network remotely, to high-end connectivity that behaves in much the same way as a point-to-point leased line, only much cheaper and vastly quicker to provision.

IP-enabled applications with a web-enabled front-end are proliferating throughout modern businesses, making managed broadband services a clear option for branches, franchises, retail outlets or distributors.

Our ADSL Data Solutions offer customers the benefits of broadband access technology, coupled with the benefits of the service being offered and managed by Qualitynet, with local support and access to Qualitynet's broad portfolio of Optimized Network Solutions.

Reliable and Cost Effective Service

Qualitynet ADSL Data solutions provide the facility and functionality of a leased circuit, without the actual presence of a leased circuit and without interfering with normal telephone operations.

If your business is distributed across multiple locations, Qualitynet can help you remove communication barriers, ensuring that your branch offices share data efficiently and cost-effectively.

ASYMMETRIC DIGITAL SUBSCRIBER LINE (ADSL) DATA SERVICES

Key Benefits

Secure VPN Solution over ADSL Link

Through ADSL based VPN access, customers can access hundreds of sites spread over a number of locations allowing customers to carry on with running their business as efficiently as possible, providing connectivity between corporate head quarters and branch offices.

Reliable connectivity with dedicated bandwidth

ADSL Data Service is provided with a dedicated bandwidth over the existing telephone network, enabling businesses to take better advantage of the advanced applications.

Qualitynet ADSL Data Service Advantages

- Connect smaller sites to your corporate VPN, cost effectively and securely.
- Enable reliable access to your corporate resources for sales offices, retail outlets and branch offices in existing or new locations.

- Extend enterprise applications to the smaller sites of your company to increase productivity and gain competitive advantage.
- Securely connect outsourcing or off-shoring partners to your business.
